

Module 16 : Linux Server - Operate Running Systems

- 1) Ps - A command to view running processes.
- 2) Kill PID command to terminate processes.
- 3) The top command provides a dynamic, real-time view of running processes.
 - It displays system summary information as well as a list of processes currently being managed by the Linux kernel.
- 4) The htop command is an interactive process viewer that's an improved version of top.
